

1. Script to Update the System

```
#!/bin/bash  
echo "Updating package information..."  
sudo apt update  
echo "Upgrading installed packages..."  
sudo apt upgrade -y  
echo "System update completed successfully!"
```

2. Check Whether a Tool Is Installed

```
#!/bin/bash  
echo "Enter the name of the tool:"  
read tool  
if command -v "$tool" >/dev/null 2>&1  
then  
    echo "$tool is installed."  
else  
    echo "$tool is not installed."  
fi
```
